

CovaWound™ Silicone

Self-Adherent Soft Silicone Foam Dressing

WHAT IS IT?

CovaWound™ Self-Adherent Soft Silicone Foam Dressing is a 3-layer, atraumatic dressing that absorbs exudate, maintains a moist wound healing environment, and prevents epidermal stripping and / or pain upon removal.

HOW DOES IT WORK?

CovaWound™ Self-Adherent Soft Silicone Foam Dressing has a soft silicone wound contact layer which facilitates application and retention of the dressing to intact skin, but will not stick to the surface of a wound or cause trauma to delicate new tissue upon removal. The centre of the dressing consists of highly absorbent polyurethane foam designed to prevent the wound bed from drying out or the surrounding skin from becoming macerated. The top layer of the dressing is a vapour permeable polyurethane membrane that acts as a barrier to liquid and external contamination.

WHEN DO I USE IT?

CovaWound™ Self-Adherent Soft Silicone Foam Dressing is indicated for the management of exuding wounds including:

- Leg and foot ulcers
- Pressure ulcers
- Traumatic and surgical wounds
- Superficial and partial thickness burns
- CovaWound™ Self-Adherent Soft Silicone Foam Dressing can be used under compression bandaging

Please refer to package insert for full instructions.
